

I-Med

Effective powerful peace of mind

Assists in protecting and caring for the medical profession, staff and students. Hospitals, Doctors surgeries, Walk in centres, Pharmacies, Medical facilities.

I-Med is a room / area based video audio alarm system that will give a controlled instant notification of problem situations that may occur 24/7

SYSTEM

I-Med is a self-contained secure recording storage processor complete with operating software contained within a tamper proof enclosure. It has three L.E.D. Indicators, GREEN, system operational, BLUE, successful enrolment, RED, Activation recording in progress. These indicators also act as a comfort visual for member of staff awareness. A high definition video audio transmission camera complete with audio channel (two-way communication) as required completes the system. It is a secure, non-intrusive and welcome addition to assisting staff in the workplace.

OPERATION

When a member of staff enters an I-Med room, wearing a wrist worn or pendant device, their unique identification code will be automatically enrolled into the system. A blue L.E.D. will confirm to the staff member their successful enrolment. At any time the staff member has the ability to activate the system, pressing and holding the device button for a period of two seconds will initiate the system activation, full recording. Both visual and audio will be streamed in high definition to designated staff monitor(s) using the existing IT infrastructure. At this stage any work being carried out on the system designated computer(s) will be minimised with the streamed video taking precedence automatically.

An instant assessment of the situation in the designated room / area is viewed, and decisions made as to the action required, a red L.E.D. indication will confirm operation and act as a comfort visual indication to the member of staff. The streamed video will also include a pre-event recording to show the events leading up to the system activation.

Pendant Device

I-Med

Effective powerful peace of mind

When the event has passed and been resolved the system is reset from the host computer and the red L.E.D. on the control panel goes out to show the member of staff that recording has now stopped. Only activation by the staff member of the pendant/wrist watch can re-start it. The staff member and only the staff member can activate the system. Normal operation cannot be viewed.

All downloaded video can only be re-viewed by secure password(s) from both the staff member involved and their designated representative (senior officer, union representative, FiveSecure) and at all times is secure and protected.

The system is intelligent and can only be operated by the I-Med member of staff from within the designated room / area.

When the staff member leaves the I-Med protected room / area automatic de-enrolment takes place, ready for the staff members return or another member of staff to enter I-Med secure area. If they are authorised then they too will be automatically enrolled into the I-Med system ready to be assisted.

All operational material and information gathered is retained within the secure building environment. However an option can be added to enable the system to report to a secure remote monitoring centre (NSI Gold) in the event that the monitoring administration is absent.

For further protection FiveSecure offer, as part of the I-Med system, the BsBs App (Be safe Be smart). This can be downloaded onto the staff member's phone (smart phone, apple, android, blackberry, windows. software version dependant). If an incident occurs outside the secure area, hospital / practice grounds / carparks, or in their personal lives, then our 24 hour monitoring centre can give immediate response and assistance.
